

Commercial Analytics

Measured imager properties including point spread function (PSF) enables higher-level processing.

Time Series

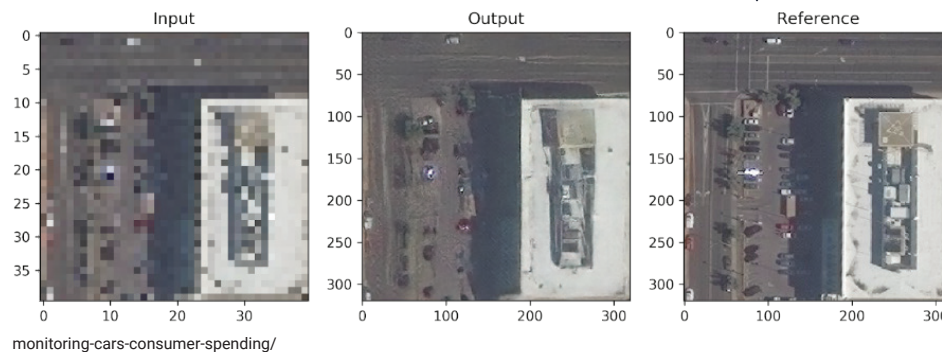

Counting Cars

orbital-insight-space-data/

Uneven calibration over time and between craft obscures actionable data.

Super-Resolution Reprocessing

Satellite imagery offers new insights in growing and diverse commercial applications.

FLARE-corrected images can accurately and easily be processed by Machine Learning (ML) or Artificial Intelligence (AI) algorithms to yield high value, actionable data.

FLARE

Vicarious Calibration Network

How does FLARE advance conventional calibration?

- FLARE is specific to each imager's optical performance
- Provides world class uncertainty
- Serves UAVs, Airborne or Satellite platforms
- Subscription service offered at fractional and controlled costs when compared to conventional methods
